Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in an interview with Brad A. Armstrong on 11/7/2001.

The application has been amended as follows:

C

Art Unit: 3721

a.) Replace claim 1 with the following:

C1
-- 1. (Amended) An improved method of using a two hand held game controller structured with a housing formed to be held by a user in two hands simultaneously, said housing having a left-hand area and a right-hand area, located in said left-hand area is a depressible pad having four codependant areas, located in said right-hand area is a plurality of single individual depressible buttons; said game controller for controlling a simulated game character by way of depressing a portion of said depressible pad and depressing said single individual depressible buttons; a television displaying said simulated game character;

wherein the improved method comprises the steps:

providing at least two of said depressible buttons as pressure-sensitive buttons;

depressing said portion of said depressible pad for at least in part controlling said simulated game character;

depressing a first one of said pressure-sensitive with varying pressure for at least in part varying action intensity of said simulated game character;

depressing a second one of said pressure-sensitive with varying pressure for at least in part varying action intensity of said simulated game character.--

F
b.) Replace claim 6 with the following:

C2
-- 6. (Amended) An improved method of using a two hand held game controller structured with a housing formed to be held by a user in two hands simultaneously, said housing having a left-hand area and a right-hand area, located in said right-hand area is a plurality of single individual depressible buttons; said game controller for controlling a simulated game character by way of depressing said single individual depressible buttons;

wherein the improved method comprises the steps:

providing at least two of said depressible buttons as pressure-sensitive buttons;

depressing a first one of said pressure-sensitive with varying degrees of pressure for at least in part varying action intensity of said simulated game character;

depressing a second one of said pressure-sensitive with varying degrees of pressure for at least in part varying action intensity of said simulated game character.--

41 C

Art Unit: 3721

c.) Replace claim 41 with the following:

41. (Amended) An improved method for controlling game imagery with a game control, said game control at least in part controlling imagery created by an image generation machine,
said game control of the type having a housing designed to be held in two hands simultaneously, said housing having a right-hand area and a left-hand area, located in said right-hand area are depressible single individual buttons, said buttons positioned to be depressed by a user's right hand thumb, depression of said buttons is for controlling said imagery; said improvement comprises the step of:
providing variable action intensity of said game imagery at least in part controlled by pressure-sensitive variable-conductance of one of said buttons.

d.) Replace claim 53 with the following:

44 ~~53~~. A game control comprising:
a housing to be grasped and held simultaneously by two hands of a human user during use, said housing including a right-hand area and a left-hand area, said right-hand area being an area for grasping by the user's right hand, said left-hand area being an area for grasping by the user's left hand;
a plurality of depressible electricity manipulating devices each at least in-part exposed on said housing;
at least one of said electricity manipulating devices positioned within said right-hand area is a pressure-sensitive analog sensor actuated by variable depression of a single individual button, said analog sensor comprising:
a depressible resilient dome cap, said dome cap positioned over
a sheet, said sheet positioned over
a board;
said game control further including means for reading a signal from said analog sensor;
means for outputting information representing said signal.

Art Unit: 3721

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: the prior art could not alone or in combination anticipate or make obvious a method, apparatus, or method of manufacturing a game controller with buttons that are connected to pressure-sensitive sensors which produce an analog, increasing output when pressure is applied to said buttons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
